What makes a good partner?

The experience of a widely recognized expert, not only fulfilling the customer's wishes but also exploiting the technical potential showing the way into the future.

The helpfulness of a trusted friend, always standing at your side when good advice and help is required. The practicality and objectivity of an advisor who can recognize and solve problems before they are materialized. Keil Anlagenbau is that kind of a partner.

Keil Anlagenbau – open for the best solutions.

For more than 40 years, the company Hans-Jürgen Keil Anlagenbau GmbH has been specializing in the conception, planning, manufacturing and installation of equipment for the storage, conveyance and dosing of fluids, gases and solids that are hazardous for water. This kind of a special experience is something that is profitable for our customers who best know how to put it to good use. Only qualified experts in technical details and with particular knowledge of the special requirements of the manufacturing industry are valuable for our customers. This makes us a reliable and skilled partner on an equal footing.

This is where we are going strong: by understanding the requirements for a solution – and outperforming the design specifications. How is this possible? Our engineers and product developers reveal the true equipment potential already in the planning phase. In many cases, we are able to offer our customers solutions that turn out to be more efficient: by saving energy consumption, by means of longer operational life, by avoiding reject and by means of lower service and maintenance costs. In other words: Those relying on Keil Anlagenbau can count on efficiency on their side.

We are standing right by your side!

Expert Advice and Planning

Could my questions contribute to the solution exceeding all expectations?

The tasks performed by an industrial system can be incredibly complex. Which means that the details are even more decisive when it comes to the quality of the result. At Keil Anlagenbau, we respond to all challenges in close dialogue with our customers. We believe that advice always begins by listening very closely. And it is often customer questions that already contain a major part of the solution. We ensure that your questions result in even better answers. By working together with you we create the optimum foundations for successful projects and use them to develop solutions that deliver you the maximum in terms of efficiency.

Does a good plan eliminate my risks before manufacturing?

We at Keil Anlagenbau set standards in precision and foresight. Our experience helps us to identify potential and risks at an early stage. This is how weak spots can be detected and eliminated, before the project moves on into the implementation phase. In this way complex reworking can in principle be excluded.

Engineering and Automation

02

Can I already discover the production standards of tomorrow today?

Are you looking for a solution that still cannot be found anywhere on the market? Then Keil Anlagenbau is the right partner for you. Because invention is our strong suit. Our engineers have been developing unique custom solutions that fulfil special industrial demands for decades. This is how we are able to provide our customers with new, more efficient production possibilities and therefore supply them with significant competitive advantages. Using your ideas and suggestions, our engineers develop a structured, transparent concept that we are happy to present to you on site. We create process charts and calculation bases in order to accelerate the process flows and present individual modules and components in detail. This is how we are able to inform you that our solution works perfectly and meets all of your standards efficiently. It is on this basis that we are able to achieve ground-breaking results in a short period of time.

Do I really need so much manpower for a perfect raw material flow?

Keil Anlagenbau has the skills and the experience in automated supply of industrial production processes. The ultimate considerable potential lies in cost effectiveness and efficiency. Our switch systems feature the possibility to automate and to visualize raw material flow according to specific individual needs. This way you can optimize your production process at all times and even when streamlining your staff requirements.

Manufacturing and Assembly

How do I know that the implementation will be as easy as it looks on the paper?

If you want to make sure that your product fulfills the planned requirement for the desired result in all details, you will need to choose a partner who will be able to provide you with expert advice, planning, manufacturing, installation and automation from a single source. Our technicians know the details of your equipment precisely and they know exactly what it comes down to in the manufacturing process. Our technicians are highly trained and skilled, working fast and accurately and with precision. We guarantee our customers entire quality assurance.

Who can guarantee that my production is running on time?

Meeting deadlines is a significant part of your investment security, since your calculation is built on your production starting promptly. We know that all processes at Keil Anlagenbau are precisely coordinated with one another and therefore prevent unnecessary delays in the advice and planning phase. Our project management team is very strong and has been tried and tested over a number of years. What's more, we all have access to the necessary technical and human resources at our own Company, so that we can also handle complex projects at any time. This is how we are able to ensure that your system can start working on time.

Procedural systems
PUR-Recycling
Gravitube®
Tank farms
Prepolymer Equipment
Discharging units
Supply systems
Automation and Switchgear construction
Service & After Sales

Fully equipped to meet the future tasks.

Keil Anlagenbau – our know-how for your production.

Procedural systems

Procedural systems offer an extremely large and broad application spectrum. Since custom and industry-specific solutions are required on a regular basis, this almost always means one-off items that we tailor to our customers' requirements.

PUR-Recycling

Keil Anlagenbau has developed a highly efficient procedure for PUR recycling in cooperation with the specialists for chemical procedure solutions, Rampf Eco Solutions GmbH & Co. KG. The system sets completely new standards in the fields of economy, efficiency, product quality and environmental performance.

Gravitube®

Gravitube® Gravitube is a world debut product developed by Keil in the field of dosing systems. Gravitube effortlessly doses even the smallest amounts – and much more precisely than many other dosing systems. For maximum loads in continuous industrial operation.

Tankfarms

Tank farms for safe and correct storage and supply of combustibles and substances hazardous for groundwater are the special field which has made Keil Anlagenbau successful and competent. This is the result of outstanding performance of more than 40 years.

Automatic production of Prepolymer

Keil Anlagenbau designs and erects highly efficient automated Prepolymer equipment for the production of cast elastomers and thermoplastic Polyurethanes (TPU). The equipment includes the storage, conditioning and dosing of required raw materials such as Polyol, Isocyanate and additives and they form the complete production route from raw material and the manufacture of Prepolymer via the cast machine and tempering all the way up to the finished end product.

Discharging units

Our discharging units come into play anywhere that a tank would be oversized. They also provide a good interim solution in the event of a tank conversion, so that our clients are able to continue operating during building work.

Supply systems

If you are dealing with industrial heating and cooling systems, supply of pressurized air, steam or vacuum equipment: Keil Anlagenbau provides you with a solution for all supply systems in the process technology.

Automation and Switchgear construction

Switchgears are required for a wide range of applications such as control, MSR technology and energy distribution. The most frequent applications and control systems of any type that are used for automation and visual control.

Service & After Sales

Service and After Sales at Keil Anlagenbau constitute one division for services only. For our customers, this means a permanent contact person with in-depth knowledge of your facility.

Efficiency by your side

Fully equipped to meet the future tasks.

We at Keil Anlagenbau firmly believe that a perfect service does not end on delivery and commissioning of a turnkey system. In reality, we direct our attention at this moment to providing you with professional maintenance that is required for continuous operation and to help you to run the production with equal efficiency on the long run. Meanwhile, we keep on looking for ways to optimize your production processes for you.

If you think of increasing your production volume, you will find Keil Anlagenbau the right partner for you. Even if we have not designed your existing system, we will be able to find a way to conceptualize and implement an extension and assist at optimizing your ideas.
