Retrofit & System modernisation

Efficiency *by your side*

Sustainable plant engineering for your production

Our experts advise you comprehensively on the sustainable development of your facilities, from analysis to concept development and implementation of the measures. An investment in your existing plant is always an investment in your competitiveness, long-term sustainability and efficiency. Instead of investment-intensive new construction, Keil Anlagenbau optimizes your existing resources. In doing so, we comply with current guidelines and laws for the protection of the environment and personnel.

Retrofit

Rely on your existing systems. Keeping existing systems ensures proven production processes, saves you the expensive disposal of equipment and ensures you maintain competitive advantages.

Retrofitting to the latest standards, including control technology, saves time, reduces costs and increases productivity - sustainably and efficiently at the same time.

Refurbishment

The facilities are continuously inspected according to the latest findings in the fields of environmental protection, energy efficiency and sustainability, and possible refurbishment measures are planned and implemented. The refurbishment of your plants protects you from expensive new acquisitions and extends the life of the existing plants without compromising efficiency and sustainability.

Automation

Bring your existing systems up to the latest technical standard. Equipping them with the latest control technology takes your production to the next level.

Automated processes not only increase productivity, but in combination with a comprehensive analysis of the documentation of the production processes, make the existing processes more efficient and ensure the quality of your products in the long term.

Repair & Maintenance

Regular maintenance and proactive repair work increases the service life of your machines and saves you high costs for new purchases. The long-term support provided by KEIL's trained personnel offers individual advice and complete service from a single source.

Your advantages with KEIL Anlagenbau as your partner

- ✓ More than 30 years of experience in machine and plant refurbishment - brownfield & greenfield
- ✓ Development and execution of repair and refurbishment concepts from a single source
- ✓ Long-term support and advice from our service department
- ✓ Professional, experienced project management and close coordination with other refurbishment measures
- ✓ Extensive, state-of-the-art in-house technical resources

Take your productivity
to the next level
